TECHNICAL DATA: CON-CLEAN

Con-clean

Con-clean is a penetrating concrete cleaner and renovator that quickly dissolves lime deposits, scale, rust, mortar, algae and mud stains from concrete interior or exterior without the dangers of raw muriatic acid.

Con-clean contains no hydrofluoric acid, ozone depleting solvents or heavy toxic metals or chromates.

Applications

Con-clean is the safe replacement for Muriatic acid to clean concrete, tile, brick, and even glass and aluminum frames to remove lime, scale, excess mortar, algae and stains prior to sealing or acid staining of the concrete. This product helps to prepare concrete to insure reaction and penetration of our acid stains. Also insures better bonding of spray textures and overlay applications.

Benefits Of Con-clean

1. Con-clean: can be used at full strength on difficult stains and will not degrade the concrete surface or interfere with acid staining of the concrete.
2. Con-clean: is economical because it is a strong, surface-active penetrant rather than a harsh strong acid. Con-clean does the job faster, with less labor and less product.
3. Con-clean works fast and efficiently with deep penetrating action that lifts off stains with a minimum of effort and no excess product wasted.
4. Con-clean is a safe replacement for muriatic acid for conditioning and cleaning concrete.
5. Con-clean will brighten copper and brass, but will not corrode them if washed off. It should not be used on magnesium, galvanized metal or stainless steel. Test plastic laminates before using Con-clean on them.

How to Use

Polyethylene or similar plastic sprayers and buckets are recommended for application. Do not use Nylon brushes. For safety, always use goggles and protective gloves. Depending on the type of stain or soil, Con-clean may be used full strength or diluted up to 1:3 with water. Apply Con-clean by brush, spray or dipping. For spray, use a very coarse spray pattern to avoid inhaling the mist and causing over spray. Allow it to soak for several minutes. Agitate heavy soil or stains with a stiff broom, then rinse thoroughly with water. Repeat application may be required on some stains.

Properties

Type: Penetrating acidic detergent renovator.
Color: Blue
Odor: Pleasant
Toxicity: Low-Do not take internally
VOC's: Low
Flammability: Nonflammable
Composition: Biodegradable surfactants, inhibitors and acidic boosters
